The source code for the Command Line Interface (CLI) is available. API functions are compiled to IL instructions. Unlike the Visual Basic and Visual C++ programming interfaces, the AutoCAD.NET programming interface uses managed C# and the functionality is provided through the .NET Framework. AutoCAD 2009 and above supports XLA (Expert Language Accelerator), a C# translation layer, to enable coding in C#. API functionality of AutoCAD is available via the ObjectARX API. There is an AJAX (Asynchronous JavaScript and XML) web service that can be used to connect to and automate the program. In version 2012 and later, AutoCAD features support '3D content creation and inspection'. Caffeic acid, a natural derivative of chlorogenic acid, protects against stress-induced intestinal barrier dysfunction. This study investigated the protective effects of caffeic acid (CA) on stress-induced intestinal barrier dysfunction. C57BL/6 mice were treated with stress alone (CST) or treated with CA and CST (CA+CST) prior to the administration of lipopolysaccharide (LPS) (a bacterial endotoxin). CA significantly decreased the levels of intestinal barrier dysfunction, as indicated by tight junction (TJ) proteins. CA did not affect the expression levels of nuclear factor kappa B (NF- κ B) or of the proinflammatory cytokines tumor necrosis factor- α (TNF- α), interleukin-1 β (IL-1 β), and IL-6. However, CA reduced the activation of NF- κ B induced by LPS. Furthermore, CA restored the intestinal barrier integrity, as indicated by recovery of the TJ proteins. These findings suggest that CA protects against stress-induced intestinal barrier
