Advanced functionalities like BIM (Building Information Modelling) and RFID (Radio-frequency identification) technologies have made AutoCAD essential for many businesses in almost every industry. AutoCAD 2020 adds some significant new features that are applicable to almost all industries. This article will describe the new features of AutoCAD 2020 and the new commands in AutoCAD with examples and screenshots. You can view all the new features and commands in the 2020 Release Notes which you can find here: AutoCAD 2020 Release Notes This article will also be updated with new information as and when it is available. So, what's new in AutoCAD 2020? Here are the new features of AutoCAD 2020 which are relevant to almost all industries. 1. New name and company name AutoCAD is now named AutoCAD 2020. The new name reflects the new name of the company which is now Autodesk. Also, the new name is quite catchy and reflects the new AutoCAD software, which has many new features and capabilities. 2. New general & data view In AutoCAD, the default view is the general view which shows the plan view of the drawing. This view is available in all the editing views (e.g., the data view, the chapter view, the blocks view etc.). In AutoCAD 2020, a new general view is available. The main difference with the previous general view is that the next and previous views are now on the top and bottom of the view. They are the default new views in all editing views. 3. New editing view AutoCAD has four editing views (data view, Chapter view, Blocks view

and Text view). The editing view is a powerful tool for the user to work on the drawing. With the release of AutoCAD 2020, a new editing view called "AutoCAD Design View" has been introduced. This view is similar to the data view. The difference is that in this view, you can see more than two sheets (sub-views). Also, this view is meant for BIM and RFID projects and consists of 2D and 3D objects. The new "AutoCAD Design View" is very useful for project plans. This view has many of the features of the previous data view and can be used to effectively

Customization In addition to the customization available through the primary tools used in AutoCAD, it is possible to modify or create completely custom functionality. These customizations are made using LSP-based tools, as well as other tools, like VBA and Visual LISP. These tools are based on technologies that are used in other products by Autodesk. These include: XML and AutoLISP. LSP is used to extend the functionality of the application, while VBA can be used to write macros and automate many of the tasks that AutoCAD can perform, and Visual LISP is used to create applications that run on the computer that draws the drawing. Most of the customization of AutoCAD is done through the use of programming. Visual LISP is the most common programming language used. Visual LISP is used to create programs, that implement new functionality for AutoCAD, either for AutoCAD itself or to create other types of software for the computer. VBA, Visual Basic for Applications, is used to automate many tasks, like completing tasks in the drawing window, such as marking a line or closing a window. Many of the add-on applications are also written in VBA, but AutoCAD Architect, which also runs as a plugin to AutoCAD, was written using Visual LISP, rather than VBA. AutoCAD's DXF, drawing exchange format, allows importing and exporting drawing information. History AutoCAD has been in use since the 1980s. Since its introduction in the late 1980s, the number of AutoCAD users has grown to more than 50 million. The software is used for 2.5 million design jobs each year. In March 2019, AutoCAD announced an "unprecedented" 3.6 million concurrent license installations on the Windows 10, Windows 7 and Windows 8 platforms. In the 1990s, there was a dispute between the Autodesk founders and the original owner of the CAD software, Steven B. Rhode. Autodesk, which had acquired the rights to the AutoCAD name from Rhode's company, had introduced a new product called AutoCAD LT in 1999, which was based on Rhode's product and was designed to be a tool that could be used by non-design professionals. Rhode claimed that the re-introduction of the product under the AutoCAD name was a breach of contract and that the Autodesk

product was illegally copied. The ca3bfb1094
